Brief Report for Project 1

My project used Brackets for the HTML file and used Visual Studio 2 for the CSS file. I used Google Chrome for my page to be tested on. This was because I am most familiar with it and use it as my default browser for other daily tasks. I did not really validate much. I just jumped into this project with prior knowledge from previous classes. The most time consuming task was just making sure everything worked between the files used. Also just the tedious task of making sure all the text looks right and the images are in the right place. For the most part it was a very fun start to this class. I will be adding more to spice up the look of the page once were able to use bootstraps. Notes about the code: The end of the program where there is </body> & </html> they are highlighted red. I believe there is an error that doesn't effect how it compiles. Maybe something that isn't closed off properly. It would be nice to know what it is but like I said it doesn't affect anything so it is not of main priority.
